Labour Force Survey Dashboard Overview

Employment and unemployment trends in Canada, 2020–2024

Presenter: Afagh Johari

Date: 2025/06/11

Why this report matters

The question

How did COVID-19 change the job market across Canada?

Before COVID → After COVID

About the author

Afagh Johari is a data analyst with 6+ years of experience in the transportation industry and in data-driven systems.

What the dashboard answers

Canada, 2020–2024, broken down by age, sex, industry and province

How many people are out of work?

Canada's overall unemployment rate

Who is most affected?

Unemployment by age group and gender

How do things change over time?

Month-by-month trends in jobs and unemployment

Which industries gain or lose jobs?

Biggest monthly job changes by industry

The dashboard at a glance

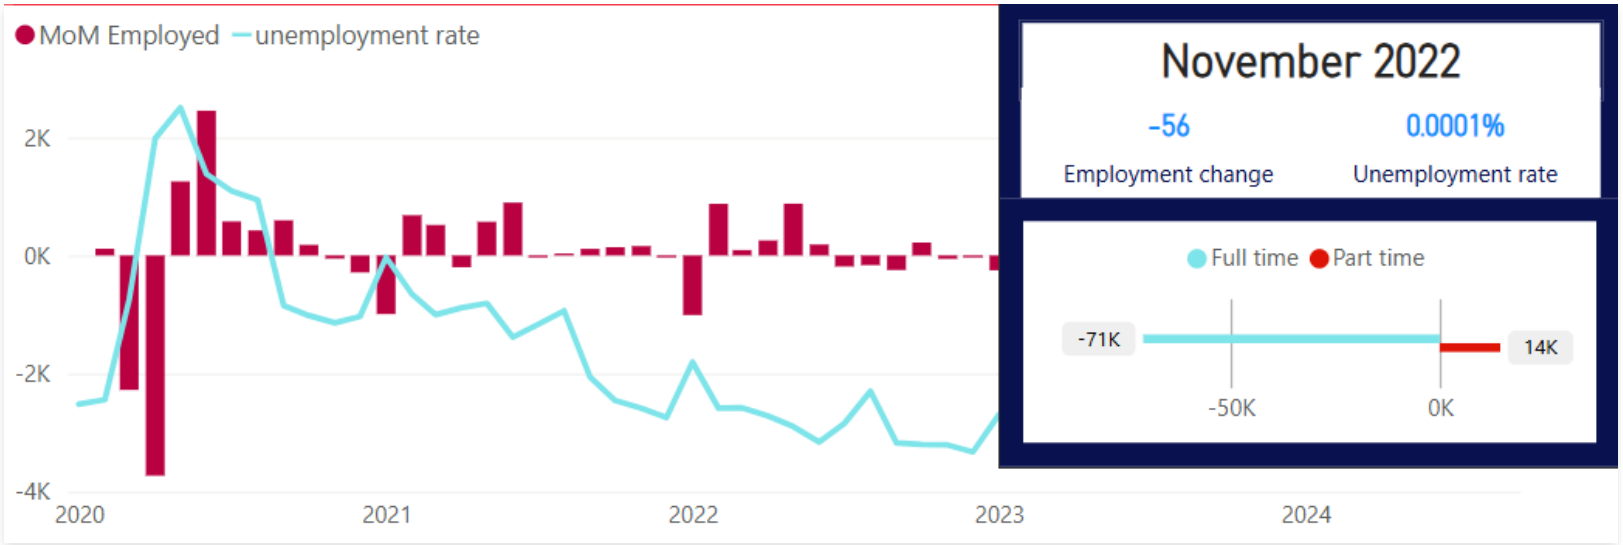

Example: 2024 view of the interactive dashboard

1. **Map**
   Darker shade = higher unemployment
2. **Age & gender bars**
   Compare groups side by side
3. **Time chart**
   Bars = jobs gained or lost; line = unemployment rate
4. **Industry list**
   Green = jobs gained, red = jobs lost

COVID hit jobs, then recovery

Red bars = jobs gained or lost each month | Blue line = unemployment rate

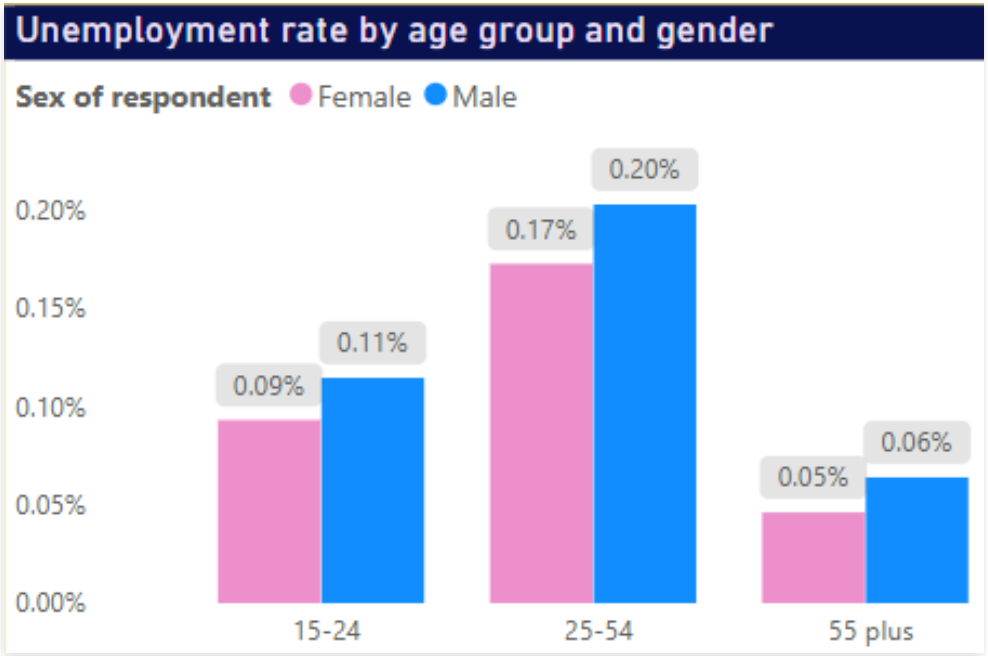

Early 2020
Sharp drop in jobs

From mid-2021
Steady recovery

Since then
Unemployment falling

Who is most affected

Pink = female, blue = male. Source: dashboard

25–54

age group with the highest unemployment rate

Men

higher than women in every age group shown

Where unemployment is highest

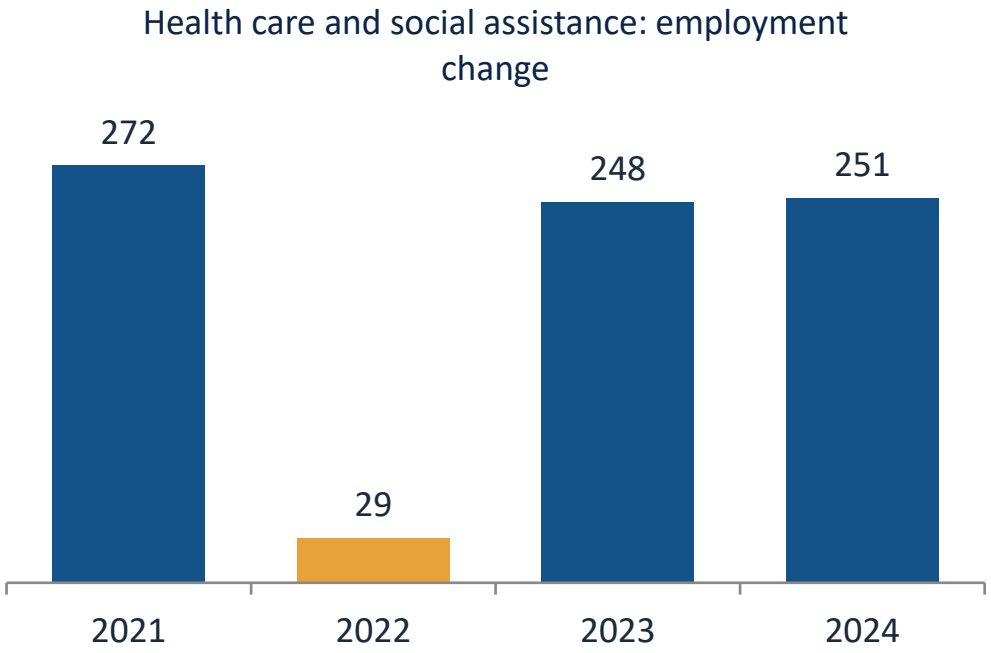

Ontario

has the highest provincial unemployment rate

Darker purple on the map = higher unemployment rate

Health care keeps adding jobs

Large job gains in 2021, 2023 and 2024

2022 was the exception: a much smaller gain

Values are monthly employment changes as shown on the dashboard. Full charts for every industry are in the appendix.

How the dashboard was built

1. Collect

Monthly Labour Force Survey files (CSV) from Statistics Canada

2. Clean

Combined the files and tidied the data in Power Query

3. Organize

Linked everything into one simple, fast model

4. Calculate

Formulas work out unemployment rate and job changes

Result: an interactive Power BI dashboard with a map, bar charts, a combined bar-and-line chart and hover tooltips that add context.

Key takeaways

- COVID-19 caused a sharp drop in jobs in early 2020
- Recovery began in mid-2021; unemployment has trended down since
- Unemployment is highest for ages 25–54, especially men; Ontario leads the provinces
- Health care adds jobs steadily, with 2022 the exception

Questions and discussion

Thank you for your time. I'm happy to answer any questions you may have.

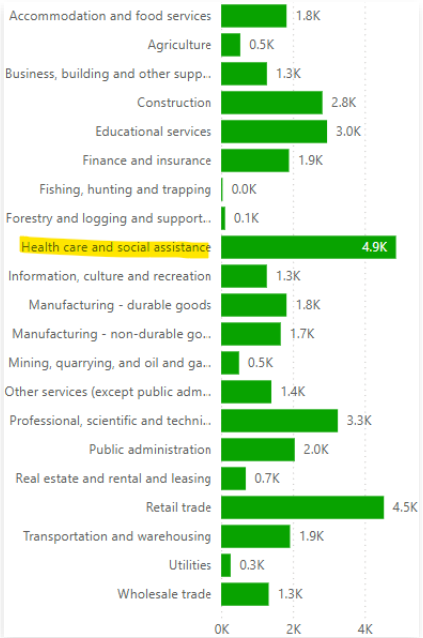

Appendix

Supporting charts and how the data is organized

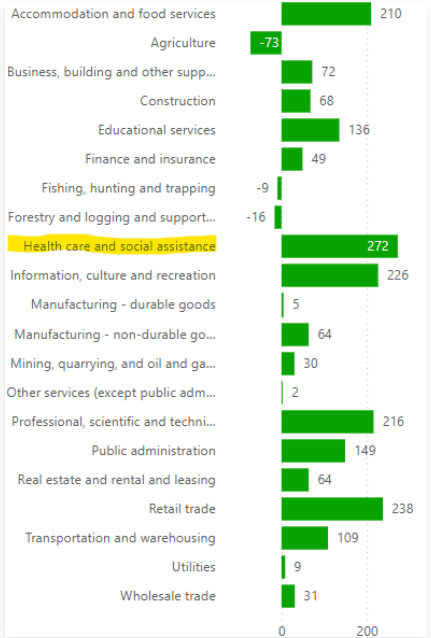

Health care jobs, 2020–2022

Health care and social assistance is highlighted in yellow in each chart

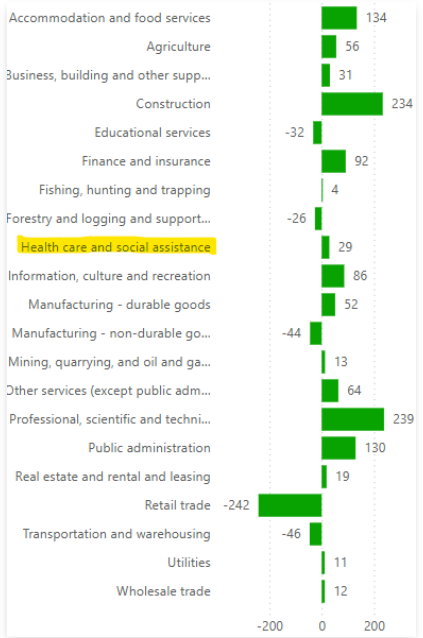

2020

2021

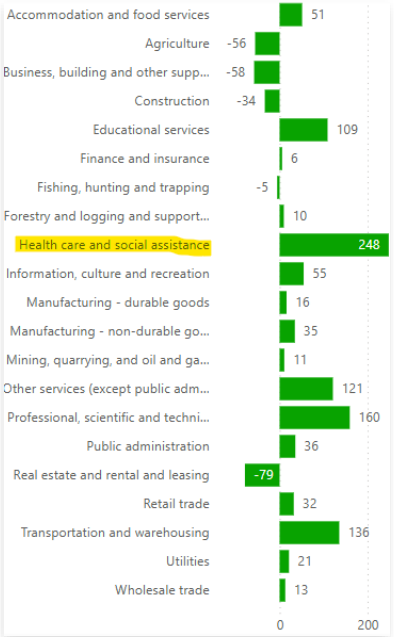

2022

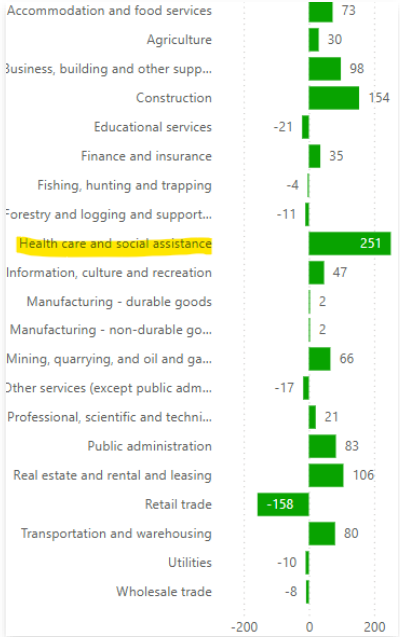

Health care jobs, 2023–2024

2023

2024

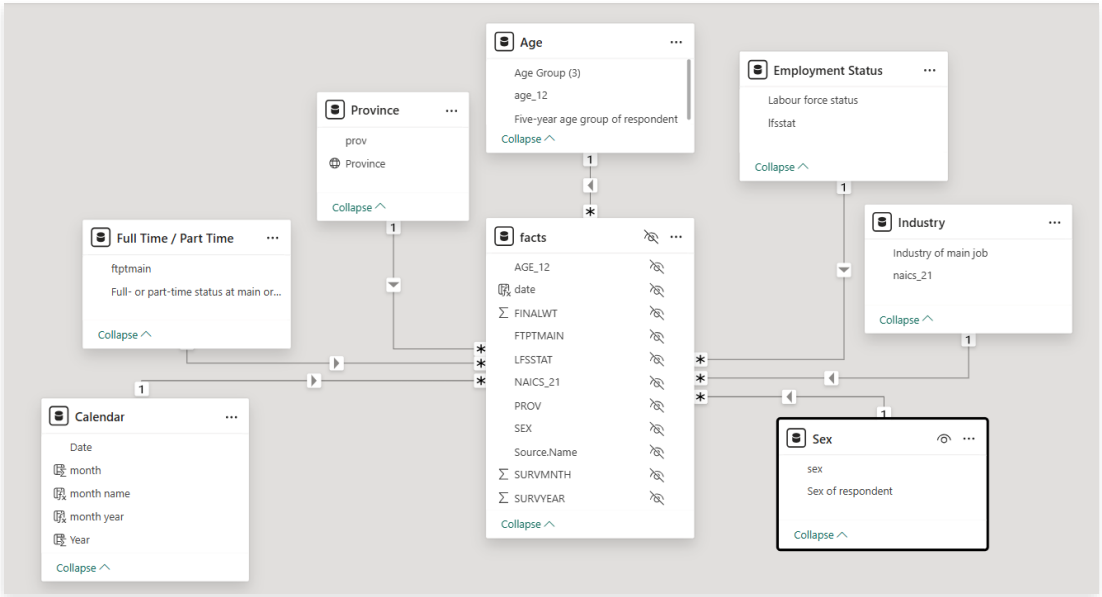

Why was 2022 low?

See this Statistics Canada article for the reference on the low 2022 result:

[Statistics Canada article]

How the data is organized

Data model in Power BI (star schema)

Center
One table of survey answers (the "facts")

Around it
Lists for age, province, industry, sex, work status and dates

Why
Each answer links to one description, so reports stay fast
